Roy Vanounou

Product Designer and builder focused on product thinking, UX, and solving complex problems.
I take ownership from problem definition and research through design, prototyping,
and implementation, getting hands-on with code when needed.

Work Experience

2025 - 2026

Spines, Product Designer

Spines is an AI-powered book publishing platform,
where I served as the company's sole designer.

- Owned end-to-end design processes and played an active role in product decisions across the platform.
- Researched, designed, and actively contributed to developing and testing internal tools, iterating on user feedback to reduce production staff's hands-on work from days to hours.
- Built the entire company's design system from scratch, defining visual standards and product design principles to ensure consistency across the platform.

2023 - 2025

IDF, Product Designer

- Interviewed stakeholders and defined UX for an app simplifying complex personnel and logistics coordination across army bases, with field conditions in mind.

Freelance, Product & Graphic Designer

- Designed landing pages, logos, and marketing assets for multiple clients; managed digital communications and reusable weekly surf schedules for a surf club.

Education

Graphic Design UX/UI, Studio 6b

2023 - 2024

- Completed professional training in UX/UI, branding, marketing, and graphic design.
- Gained hands-on experience in UX research, interface design, and visual communication.

Military Experience

Multi-Dimensional Unit 888, IDF

2018 - 2021 (current reservist)

- Took part in the establishment and early development of the unit as part of its first recruitment cycle.
- Executed high-pressure operations requiring adaptability and quick decision-making.
- Active member of the unit's selective sorting team during the tryout and interview phase for new recruits.

Skills

Languages

Hebrew (native)

English (fluent)

Core Skills

UX & Product Definition

I clarify requirements and constraints, investigate user needs and existing workflows, then synthesize findings into a focused problem definition, scope, and priorities.

Prototyping & Building

I explore multiple directions through flows and rapid prototypes, then iterate on feedback to narrow ideas into a clear, testable solution. (Figma Make, Lovable, Base44)

Design to Delivery

I deliver what the project needs: production-ready Figma files with components and design systems, or working implementations built with AI-assisted development.

Cross-functional Collaboration

I bring strong interpersonal and communication skills, working effectively across teams to align people, solve problems, and deliver results.
